SUPERSTORE SALES DASHBOARD INSIGHTS

WHAT I DID: Built a single interactive dashboard to monitor sales performance across regions, categories, customers and time to enable faster data driven decisions.

DATA: Superstore Sales Dataset containing 10,000+ transactional records covering sales across 4 regions, 3 categories and 49 states from 2014 to 2017.

MY PROCESS:

- Loaded and cleaned data using Power Query
- Created 4 DAX measures (Total Sales, Total Profit, Total Orders, Profit Margin %)
- Built 7 interactive visuals on a single canvas
- Added a year slicer, region slicer and category slicer to filter all visuals simultaneously
- Used a Filled Map to visualize sales geographically

KEY FINDINGS:

- Technology is the highest grossing category, driving the most revenue and profit across all product lines.
- The West region leads all four regions in total sales with California being the standout state , confirming the West as the business's strongest and most valuable market.
- Sales and profit show a consistent upward trend year on year, with 2017 recording the highest performance across both metrics, demonstrating healthy business growth.

RECOMMENDATION: The business should prioritize investment in its Technology product line and increase marketing efforts in California and the South region where demand is strongest. The consistent year on year growth from 2014 to 2017 suggests the business model is working well.

A deeper analysis into Q4 performance is also recommended to maximize peak season returns.
